## **FITTING INSTRUCTIONS**

- To fit the R&G Exhaust Hanger, the OEM pillion footrest mounting bracket needs to be removed.
- To do this, remove the two top mounting bolts of the pillion footrest mounting bracket.
- Remove the exhaust mounting bolt and then remove the OEM pillion footrest mount from the bike.
- Take the R&G Exhaust Hanger (item 4) and fit the two shorter bolts (Item 5) with washers (Item2) through the two top mounts.
- Place one washer (item 2) through the protruded end of the bolt positioned in top front mount as shown in the exploded diagram.
- Offer the exhaust hanger assembly towards the subframe and loosely fit the two top mounts into the threaded bosses on the subframe as original.
- With the exhaust hanger on the bike, ensure the lower part of the exhaust hanger is on the outside of the exhaust mounting bracket. Locate the last M8 bolt (item 1) with a washer (item 2) through the front face of the bottom mount. Locate the last washer (item 2) and Nyloc nut into the protruded end of the bolt on the other side of the bracket.
- Ensure the exhaust hanger is correctly fitted before tightening all three bolts to 20 Nm.
- Please ensure when the motorcycle is being used that no parts are in such a position that they may collide/damage other bike parts (this is particularly important if using after-market cans or exhaust systems).

***Please note that it is your responsibility to ensure that no part of the exhaust hanger or exhaust assembly fouls or comes into contact with other parts of the machine. Do not ride the motorcycle until this aspect has been verified and you have compressed the rear suspension (if appropriate to the design of the motorcycle) to test this thoroughly.***
