FITTING INSTRUCTIONS

- To start this fitting process, place one barrel nut (**Item 5**) onto the end of the spindle bar (**Item 1**) and tighten until at least half of the spindle bar thread is inside the barrel nut.
- A fitting suggestion: using a small amount of Loctite on the Spindle bar thread will help create an even number of threads on both sides of the swingarm protector once fully tightened.
- Now slide one crash protector bung (**Item 4**) and LHS Spacer (**Item 2**) onto the bar in the configuration shown in the ASSEMBLY DIAGRAM.
- Slide the assembly through the LHS of the rear spindle. Once through place the RHS Spacer (**Item 3**) and remaining crash protector bung (**Item 4**) onto the end of the spindle bar that's protruding through the LHS.
- Finally, place the second barrel nut (**Item 5**) over the exposed end of the spindle bar and tighten with two 5mm Allen keys simultaneously to the correct torque using the **GENERAL TORQUE SETTINGS** table on **PAGE 2**.
